Cin7 Integrates With QuickBooks Enterprise

Integration combines on-premise accounting software with the flexibility and economy of cloud-based inventory management

AUCKLAND – July 2, 2018 – Cin7, a world leader in cloud-based inventory management now integrates with QuickBooks Enterprise, one of North America’s most popular desktop-based accounting solutions.

The integration opens the door for QuickBooks Enterprise users that have invested in a feature-rich, on-premise accounting solution but also need flexible, comprehensive inventory management to meet the demands of modern, multi-channel commerce.

“Cin7 recognizes the fact that many businesses in North America have preferred to keep vital systems within their internal networks,” says Cin7 Founder and Chief Architect Danny Ing. “Our integration with Enterprise takes those businesses one big step further towards the cloud, giving them the ability to control stock everywhere they hold and sell products.”

Cin7 gives QuickBooks Enterprise users the flexibility to manage stock and automate sales processes across all their channels. Multi-channel retailers, distributors, wholesalers and franchises use Cin7’s built-in features and integrations to control stock at the POS, through eCommerce websites and online marketplaces, with big box retail trading partners and more.

“Cin7 gives powerful cloud-based inventory management to QuickBooks Enterprise users, without the astronomical cost of integrating on-premise software with multiple channels,” Ing says. “This is especially important for growing businesses that want to scale, add new channels, or expand to overseas markets.”

Using Cin7, such companies have a real-time and accurate view of stock levels, stock values, and cost of goods sold. With QuickBooks Enterprise, they can easily understand their gross profits, with a few clicks of their mouse.

About Cin7

Cin7 is an all-in-one, cloud-based inventory solution that provides real-time visibility, control, and reporting to manage inventory from one end of the supply chain to the other. Cin7 includes built-in production, warehouse, POS, and B2B eCommerce functionality, along with a growing list of third-party integrations. Optimized for growing, multi-channel companies that need efficient, cost-effective inventory management at a fraction of the cost of a full ERP system. Cin7 is “Connected Inventory”, bridging the gap between suppliers and sales channels to give end-to-end supply chain control. Headquartered in Auckland, New Zealand, Cin7 also has offices in the United States and the United Kingdom. To learn more, visit www.cin7.com.
